

PAUL PIOTROWSKI

Miami, FL | (786) 236-5348 | paulpiotrowski@gmail.com | linkedin.com/in/paul-pio | github.com/PaulPio | paulpio.com

EDUCATION

B.S. Computer Science — Florida International University — GPA: 3.76

Expected Apr 2028

Clubs: INIT, Google Developer Group, AAVE, CASHI

TECHNICAL SKILLS

Languages & Frontend: TypeScript, JavaScript, Python, C++, Java, React 19, Next.js, Tailwind CSS, Vite

Backend, Data & AI: Node.js, REST APIs, Supabase, MongoDB Atlas, Gemini, Claude, Mistral AI, Hermes

Tools & Infra: GitHub Actions, Vercel, Docker, Puppeteer/Playwright, Git

WORK EXPERIENCE

Software Engineer Intern — City of Coral Gables, Coral Gables FL

May – Jun 2026

Stack: Python · Gemini Veo · PyGame · OpenCV · Playwright · Raspberry Pi

- Engineered an AI-powered smart city kiosk proof of concept on a Raspberry Pi 5 in 3 weeks, turning raw hardware into a functional interactive IoT installation for the city.
- Programmed a state-driven Pygame frontend to manage the AI avatar's lifecycle, triggering Gemini Veo-generated video states (Idle, Listening, Speaking) in real time.

Software Engineer — Stride Rent a Car, Miami FL

Dec 2025 – May 2026

Stack: React · TypeScript · Tailwind CSS · Supabase · Rently API · HQ Car Rental API · Vercel

- Architected a 6-module enterprise dashboard integrating the Rently and HQ Car Rental APIs to manage over 1,200 vehicles and 5,000 monthly reservations, saving over 45 hours of manual work weekly.
- Developed an AI workflow that extracts rental agreement data from PDFs and generates bank-ready rebuttal letters, cutting chargeback response time 90% from 30 minutes to under 3.
- Constructed a fleet availability view showing daily rental counts by car category and location, pulling live data from the main rental software API, so the team could see availability by date for the first time.
- Shipped every feature from requirement to production as the sole engineer across reservations, pricing, and chargeback systems, keeping software running smoothly for a company processing over 5,000 reservations monthly.

PROJECTS

ProfSummarizer — AI Lecture Tool

Jan 2026 – Present

Live: prof-summarizer.vercel.app

Stack: TypeScript · React 19 · Supabase (Edge Functions, PostgreSQL, Auth) · Gemini 2.0 Flash · GitHub Actions · Vercel

- Developed an AI lecture tool used by 5 FIU students processing over 50 lectures weekly, driving a 20% average improvement in test scores.
- Architected a serverless Supabase Edge Functions backend with independent transcription, summarization, and chat modules behind a clean REST interface.
- Secured user data with Google OAuth authentication and PostgreSQL-backed persistent storage, keeping each student's notes and quiz history private.

DisputeDefender — AI Chargeback Rebuttal Generator

Jan 2026

Live: dispute-defender-two.vercel.app

Stack: TypeScript · React · AI generation · PDF extraction · Vercel

- Automated rental agreement processing by extracting details from uploaded PDFs and generating professional rebuttal letters to fight chargebacks in seconds.
- Established a three-step workflow, upload, enter dispute details, download letter, alongside a case management dashboard to track every dispute end to end.

PlateSpotter — AI License Plate Logging PWA

Feb 2026

Live: plate-spotter.vercel.app

Stack: TypeScript · React 19 · Tailwind CSS · Gemini Vision API · Vite · PWA · GitHub Actions · Vercel

- Launched a PWA used daily across 2 offices, cutting repair order logging time 80% (20 min to under 4) through automated Gemini Vision scanning.
- Devised a dual-Gemini pipeline pairing Pro Vision for license plate scanning with Flash Lite for real-time text formatting, syncing data to Google Sheets via a serverless webhook with zero manual typing.

OpenRouter Provider — nous-core (Open Source)

Jun – Jul 2026

Live: github.com/orthogonalhq/nous-core

Stack: TypeScript · Node.js · REST APIs · OpenRouter · LLM Infrastructure

- Contributed a certified OpenRouter provider to nous-core, an open-source AI agent framework, reusing the shared ChatCompletions architecture with full model discovery.
- Navigated three rounds of maintainer review, resolving feedback on auth fallback safety and API key validation across 15 files before the pull request was merged.
